

Finally! A company dedicated to providing alternatives to toxic chemicals and materials.

High Ground brings innovation to consumer products for families, home and garden, farms, and businesses through their growing product line ranging from herbicides and gardening products, to non-wood structural building materials.

High Ground manufactures and markets products that work, yet do not harm the people, pets, surface water, the planet, or its inhabitants.

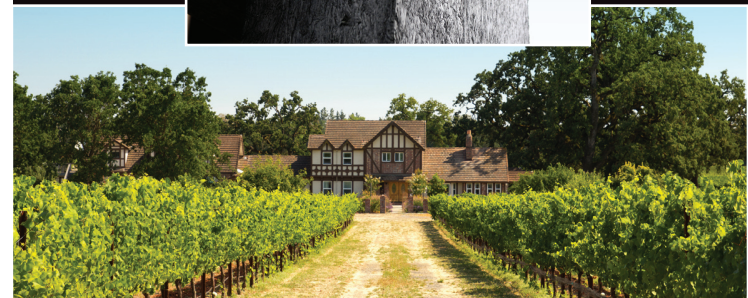

We are excited to offer HG Tough and Timeless Lumber Products to our agricultural and gardening communities. For mechanical properties and available lumber profiles, please visit our TAT Lumber website page:

**THE LONG TERM ANSWER TO
FUNCTIONAL AND DECORATIVE
LANDSCAPE AND VINEYARD
INFRASTRUCTURE**

High Ground is pleased to make Tough and Timeless™ (TAT) brand structural plastic lumber products available for farms, gardens, and industrial settings where the threat of wood rot failure has plagued and frustrated farmers and gardeners for centuries. This material is approved and recommended for organic farming operations, including animal applications.

TAT Lumber does not leach harmful chemicals. TAT Lumber is a composite made from 100% post-consumer recycled plastic, has the appearance of natural wood in the landscape, and can be put directly into the ground without preservative or maintenance. The economic advantage of TAT Lumber over wood is that its purchase is a capital expense, which can be depreciated over time. Check with your certifying agency for final organic approval.

Structural TOUGH AND TIMELESS (TAT) lumber products are made from 100% post consumer recycled plastics, no wood products are harvested or used to make our common fence posts, special structural profile lumber, utility poles and accessories, construction and erosion mats, and specialty general construction lumber profiles. The unique and patented thermoplastic process turns recycled plastics into structural components durable enough to replace wood and other construction materials with beams, pilings, t- and l-beams that have no foreseeable wear down.

Perfect support for heavy and vigorous vines, such as grape, ivy, and wisteria. TAT lumber requires no footings, and our structural products are intended for weight bearing applications. Tall and wide pergolas and arches withstand the weight and development of vines and thickening runners.

Tough and Timeless (TAT) Lumber is a registered trademark of High Ground, Inc.

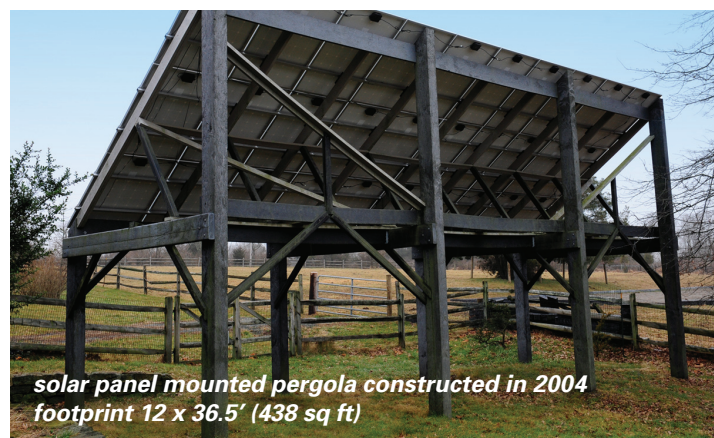

TAT lumber products are sold to the agricultural industry for use as:

- raised beds, vineyard posts, pergolas
- stream bridges, raised decking structures, suspended walkways
- animal confinements, stalls, run-in and loafing sheds, poultry houses
- riding ring borders, temporary fencing, heavy duty gate posts
- compost, stone, aggregate storage and mixing bays; erosion stability mats
- tree stakes, bollards, and much more!

Fencing and animal containments made from TAT Lumber do not rot when in contact with the ground or rot from animal excreta, just hose clean. TAT lumber construction materials can go right into the ground unprotected, do not leach harmful chemicals, and are animal resistant from normal impact, rubbing, and chewing. TAT lumber is handled and fabricated the same way as wood lumber, using conventional fasteners, and tools.

USDA-FSA low interest loans available for eligible farm-based customers. For more information, visit our website at www.highgroundusa.com.
